

A	FHR ENGINEERING DOCUMENTATION STANDARD Purpose: This document proposes common conventions for naming, revising, reviewing, and identifying engineering documents created by the BYU–Idaho Formula Hybrid Racing team. Status: This is a proposed standard and is not mandatory until reviewed and approved by the team. Currently is the standard for the VCM board. DOCUMENT NUMBER FORMAT FHR–[PROJECT]–[SUBSYSTEM]–[DOCUMENT TYPE]–[NUMBER] Examples: FHR–VCM–LOG–SCH–001 FHR–VCM–PWR–SCH–001 FHR–VCM–LOG–PCB–001 FHR–VCM–SYS–DIA–001 FHR–VCM–LOG–TST–001 PROJECT: Identifies the project, such as VCM. SUBSYSTEM: Identifies the relevant area, such as LOG, PWR, or MECH. DOCUMENT TYPE: Identifies the document, such as SCH, PCB, DIA, or TST. NUMBER: A sequential number for documents of that type. REVISION SYSTEM 0.1 = Initial draft 0.2 = Updated draft 0.9 = Draft ready for approval 1.0 = First approved version 1.1 = Minor approved change 2.0 = Major approved change Revision rules: – The document number identifies what the document is. – The revision identifies which version it is. – Normal saves do not require a revision change. – Meaningful content changes require a revision update. – A new revision should include a change description. – Approved documents should not be silently overwritten. – Earlier released revisions should remain available for reference. Example: FHR–VCM–LOG–SCH–001 Rev 0.2 means the second development version of the VCM Logic Board schematic. FHR–VCM–LOG–SCH–001 Rev 1.0 means the first approved version of that same schematic. REVIEW AND APPROVAL PROCESS 1. The author creates the document. 2. The author checks it for obvious errors. 3. The document is marked DRAFT. 4. The document is submitted for review. 5. Reviewers record questions, errors, and requested changes. 6. The author updates the document. 7. The team confirms that the changes are complete. 8. The document is marked APPROVED or RELEASED. 9. The approved revision is preserved. 10. Later changes create a new revision. A document should not be marked APPROVED or RELEASED only because it looks complete. The responsible reviewers must agree that it is ready for its intended use.	SCOPE This proposed standard may apply to: – Engineering drafts – Schematics – PCB layouts – Block diagrams – System diagrams – Mechanical drawings – Test documents – Bills of materials – Interface documents – Manufacturing documentation REQUIRED DOCUMENT INFORMATION Each controlled document should include, when applicable: – Organization or team – Project name – Subsystem or board – Document title – Document number – Revision – Status – Date – Author or designer – Reviewer or checker – Approver – Sheet or page number – Change description Documents may use different title–block layouts, but the identifying information should remain consistent. STATUS DEFINITIONS DRAFT: The document is being developed and may contain incomplete information. It is not approved for final use. IN REVIEW: The document has been submitted for review. Changes may still be requested. RELEASED: The document has been reviewed and approved for its intended use, such as design, testing, construction, or manufacturing. OBSOLETE: The document has been replaced by a newer document or revision. It should not be used as the current version. Current document status: DRAFT	ABBREVIATIONS Organization: FHR = Formula Hybrid Racing Project and subsystem codes: SYS = Entire system LOG = Logic subsystem or Logic Board PWR = Power subsystem or Power Board MECH = Mechanical subsystem CTRL = Controls subsystem SENS = Sensors subsystem Document type codes: SCH = Schematic PCB = Printed circuit board layout DIA = Diagram DWG = Engineering drawing BOM = Bill of materials TST = Test document REQ = Requirements document ICD = Interface–control document STD = Standard REF = Reference document ASM = Assembly document Example: FHR–VCM–LOG–SCH–001 FHR = Formula Hybrid Racing VCM = Vehicle Control Module project LOG = Logic Board SCH = Schematic 001 = First document in that category		
D				Applies to drafts, drawings, diagrams, schematics, and related documents Proposed Team Standard – not yet approved Status: Draft Document No: FHR–STD–001 BYU–Idaho Formula Hybrid Racing Sheet: / File: FHR_Engineering_Standard.kicad_sch Title: FHR Engineering Documentation Standard Size: A4 Date: 2026–09–18 Rev: 0.1 KiCad E.D.A. 10.0.6 Id: 1/1
